## **CLAIMS**

The embodiments of the invention in which an exclusive property or privilege is claimed are defined as follows:

An article of footwear comprising:
an upper including a lower portion;

5

20

a midsole extending along a length between a forward most portion and a rearward most portion, said midsole including opposing sidewalls that extend from said rearward most portion to said forward most portion and form a visible exterior of said midsole, said midsole including an upper surface and a bottom surface, said upper surface direct attached to said lower portion of said upper, said bottom surface including at least one midsole bottom surface trim line positioned inward a preselected distance from said side wall on said bottom surface, said midsole bottom surface trim line non-coincident with said side wall; and

an outsole joined with said bottom surface of said midsole and concealing said midsole bottom surface trim line.

- 2. The article of footwear of claim 1 wherein said outsole is substantially flat.
- 3. The article of footwear of claim 1 wherein the midsole bottom surface includes a periphery corresponding to the shape of a wearer's foot.
- 4. The article of footwear of claim 3 wherein the outsole terminates with the midsole bottom surface so that the side wall is substantially uncovered by the outsole.
- 5. The article of footwear of claim 1 wherein the upper includes an insole, said insole joined with the lower portion of the upper to close the upper.
- 6. The article of footwear of claim 1 wherein the lower portion includes a peripheral edge bent inward toward the center of the shoe.

- 7. The article of footwear of claim 1 wherein the midsole includes a side wall trim line in substantially only at least one of the forward most portion and the rearward most portion of the midsole.
- 8. The article of footwear of claim 7 wherein the side wall trim line is substantially only vertical.
  - 9. The article of footwear of claim 1 wherein the midsole is formed with opposing side molds abutted against a lower mold along a seam, wherein the midsole bottom surface trim corresponds to the seam.
    - 10. A footwear construction comprising:

an upper;

5

15

20

a midsole including a lateral side wall, a medial side wall, an upper surface direct attached to said upper, and a bottom surface, said bottom surface bounded along a medial edge by said medial side wall and a lateral edge by said lateral side wall, said medial side wall and said lateral side wall extending upwardly from said bottom surface to said upper, said midsole including a bottom surface trim line positioned inward from said lateral side wall and said medial side wall; and

an outsole joined with said midsole bottom surface that conceals substantially all of said bottom surface trim line.

- 11. The footwear construction of claim 10 wherein said outsole is substantially flat and extends substantially only across said width.
- 12. The footwear construction of claim 10 wherein said midsole bottom surface trim line corresponds to the shape of a wearer's foot.

- 13. The footwear construction of claim 12 wherein said lateral side wall and medial side wall terminate in at least one of a forward portion and a rearward portion of the midsole, and wherein a side wall trim line is positioned in substantially only at least one of said forward portion and rearward portion.
- 14. The footwear construction of claim 10 wherein the upper includes a lower portion and an insole is secured to the lower portion, wherein the midsole is direct attached to the insole.
- 15. The footwear construction of claim 10 wherein said midsole includes a first vertical side wall trim line at a forward most portion of the midsole and a second vertical side wall trim line at a rearward most portion of the midsole.
- 16. A method for manufacturing an article of footwear comprising: providing an upper;

5

15

20

closing a plurality of side molds against a lower mold to define a midsole cavity, the side molds including a first surface corresponding to at least one side wall of a midsole, the lower mold including a second surface corresponding to at least a portion of a bottom surface of the midsole, the lower mold and side molds further defining a seam therebetween;

introducing material into the midsole cavity to form the midsole including the at least one side wall and the bottom surface, the material seeping into the seam to form a flashing disposed substantially only on the bottom surface of the midsole;

removing the midsole from the mold; and securing an outsole to the midsole.

17. The process of claim 16 comprising removing the flashing to form trim lines before attaching the outsole to the midsole.

- 18. The process of claim 16 comprising securing the outsole substantially only to the bottom surface of the midsole.
- 19. The process of claim 16 wherein the upper includes a lower portion and is enclosed with an insole joined with the lower portion.
- 20. The process of claim 16 wherein said trim line is positioned inward from said side walls of the midsole a preselected distance.
